REVERSE ENGINEERING | Casting & Core

Quality Management

Diatelch ensure quality through various methods, like control plans, quality check points, DFMEA, PFMEA, die parts and casting inspection through a blue light scanner, and die PPAP by the QAD-Product department.

Continual improvements in the product as well as the process of the company are achieved with the employee's participation through Quality Circle Group (QCC) meetings, where non conformance is identified and corrective and preventive measures initiated. We call this phenomenon as DfR (Do it Right).
